

AI Use Declaration Form

Course: Introduction to Artificial Intelligence

Lab Title: Lab 1 Part A — Uninformed Search Algorithms

Student Name: _____ Emmanuel

Odoom _____

Student ID: _____ 35682028 _____

GitHub Repository Link: _____ <https://github.com/BentSul/ai-course-lab0.git>

Date Submitted: _____ June 5th 2026 _____

1. AI Use Summary

Question	Student Response
Did you use any AI tool for this lab?	Yes
Estimated percentage of the work influenced by AI	45 %
Did you attach evidence of AI use where applicable?	I specified in the comments

2. Details of AI Use

Complete the table below for each AI tool used. Add more rows where necessary.

Name of AI Tool Used	Purpose for Using the Tool	Prompt or Instruction Given to the Tool	Part(s) of the Work Influenced by the Tool	How I Verified, Edited, or Improved the AI Output
Claude	To give me the synopsis of whatever was going on in the lab		The parts not known to me	I changed my variable names and simplified some implementations

3. Attachment of AI Output Evidence

Where required, attach evidence of AI use. Tick all that apply. Add more rows where necessary.

Evidence Type	Attached? (Yes, No, N/A)	File Name
AI-generated draft		
Prompt history		

Screenshot of AI interaction		
Exported AI conversation		
AI-generated code snippet		
Revised version showing student input		

4. Student Declaration

I declare that:

Declaration Statement	Response (Yes/No)
The submitted work is my own work.	Yes
Any use of AI tools has been clearly declared in this form.	Yes
The prompts, instructions, and AI-generated outputs have been disclosed where applicable.	No
I reviewed, tested, edited, and improved any AI-generated content before submission.	Yes
My AI usage does not exceed 25% of the entire work.	
I understand that undeclared or excessive AI use may be treated as academic misconduct.	Yes

Student Signature: _____ EKBO _____

Date: _____ June 5th, 2026 _____

What this error means

`nvidia-smi` is NVIDIA's GPU monitoring tool. This error simply means no NVIDIA GPU (or its drivers) is detected on your machine — so the command doesn't exist.

It's not a Python bug; your code is trying to check for a GPU and failing because there isn't one available (or drivers aren't installed).

How to fix it

The cleanest fix is to make the GPU check optional so it doesn't crash:

```
python
import subprocess

try:
    gpu_info = subprocess.run(['nvidia-smi'], capture_output=True, text=True)
    if gpu_info.returncode == 0:
        print("GPU Available:")
        print(gpu_info.stdout)
    else:
        print("No GPU found.")
```
